**SCC-B2315**

### Wide Dynamic Range

Backlight function allows dark subjects to be viewed vividly under bright lighting or sunlight.

Without WDR

WDR

### Day / Night

Optimal images are shown 24 hours a day, by switching between color and black & white mode according to the brightness level.

Day

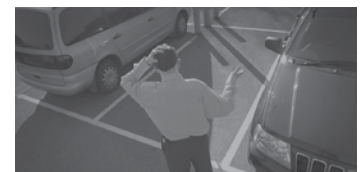

Night

### Minimum Scene illumination of 0.0005 Lux

This function delivers optimal video images around the clock by switching between color and black-and-white mode depending on the ambient light level, and provides noiseless sharp image quality when the AGC (auto gain control) function and the ES Mode (low-speed shutter) are used together

General

Minimum scene illumination
